Building Pokopia Tracker Application

10

You will be creating a full application in this repository:
https://github.com/ChantalSchot/pokopia-tracker/tree/feature/full-application

- ignore existing files for repository creation
- the entire prompt for creating the app can be found here:
https://github.com/ChantalSchot/pokopia-tracker/blob/feature/full-application/prompts/prompt-claude.md
- import data json files can be found here:
https://github.com/ChantalSchot/pokopia-tracker/tree/feature/full-application/resources/json

Complete phase 1 of that prompt first, wait with phase 2 until confirmed.

Running tasks in parallel

Good — GitHub is available via the `gh` CLI. Let me first read the prompt file and JSON resources from the repository to understand what needs to be built.

Reading the prompt file and JSON resources from GitHub

Creating todo list for Pokopia Tracker Phase 1

Reading JSON resource files from GitHub

Reading prompt-claude.md

Reading JSON resource files from GitHub using correct API format

Reading more pokemon data to understand idealHabitat values and favourites structure

Marking JSON reading tasks as complete

Reading more pokemon data structure details

Reading favourites.json to understand the flavour favourite structure

Cross-referencing pokemon favourites with favourites.json to identify flavour favourites

Checking items.json for favourite field and understanding item-favourite mapping
